SUMMARY

Full-stack developer with 6+ years of expertise in JavaScript Frameworks. Proficient in NextJS, React, Angular, Strapi, and NodeJS. Skilled in developing custom web applications across diverse industries. Known for delivering high-quality solutions and collaborating effectively in cross-functional teams.

TECHNICAL SKILLS

- Next JS / React JS
- Node JS
- AWS

- TypeScript
- MongoDB
- Strapi

- Redux / RTK Query
- Azure
- React Native
- Angular
- Jest

EXPERIENCE

4mation Technologies, NSW, Australia

March 2021 – Current

JavaScript Developer

FENNER

• Developed a conveyor belt management portal as a full-stack engineer using Angular, NodeJS, and Azure. Implemented a dashboard to manage insights, perform complex computations, and visualise high volumes of data.

Tech Stack: Angular, Plotly, Azure serverless, NodeJS, Express.js, Mongoose, Jest and CosmosDB.

IPSI

- Designed and implemented a dynamic iframe engine using NextJS. Developed an application that consumes JSON data
 to generate secure payment forms, validating inputs and managing client information for payment transactions.
 Tech Stack: NextJS, TypeScript, Redux, Jest and Storybook.
- Integrated Mastercard's Click to Pay service into the iframe engine and controlled the flow using JSON data. Tech Used: Mastercard Click to Pay Service

Divorce justice

Built a mobile-first web app using Bubble. The app features questionnaires for evaluating mental health, a search
function for accessing legal services, and appointment scheduling with lawyers, along with a collection of general
wellbeing blogs.

Tech Stack: Bubble.io

Heavy Metal

 As a full-stack developer, built an NFT marketplace using GatsbyJS and Strapi. The platform enables users to buy, share, and read purchased comic books online. Admin features include managing NFTs and a WYSIWYG editor for writing blogs.

Tech Stack: GatsbyJS, TypeScript, Redux, RTK Query, Strapi, Ckeditor and Metamask.

Jayride

• Integrated Google Analytics GA4 into an Angular web application for data collection and insights. Tech Used: GA4

Rollareel

• Enhanced an Angular web application by implementing subscription validation, photograph uploads, image sharing, and gallery views.

Tech Stack: Angular

CRUZ

As a full-stack developer, built an application to streamline jackpot winner data collection using NextJS and Strapi. The
dashboard collects and validates user data, providing Role-based Access Control for transaction approvals.
 Tech Stack: NextJS, TypeScript, Redux, RTK Query and Strapi.

PSS

• Rebuilt a job tracking and management system as a full stack developer. The system includes features for job and invoice management and a job scheduling, and tracking system.

Tech Stack: NextJS, TypeScript, Redux, RTK Query and Strapi.

Nata

• Engineered a chatbot using OpenAI Chat APIs to understand incoming user queries and provide users with relevant department information and contact details.

Tech Stack: NextJS, TypeScript, OpenAI, Vercel and PineconeDB.

Yintro

• Developed features for react native mobile applications. Implemented favourite and sharing features. Tech Stack: React Native, Redux, RTK Query, Strapi and Firebase.

My Guest List, Melbourne, Australia

Sept 2020 - March 2021

JavaScript Developer

- As a MEAN stack developer, developed new features for the Sprout Send platform. Created modular UI components and services using Angular.
- Updated API dependencies to improve performance and implemented passport middleware authentication in the backend services.
- Created token generation to facilitate third-party application integrations.

Tech Stack: Angular, NodeJS, Mongoose, AWS.

Ford Motor, Melbourne, Australia

April 2020 - Jun 2020

Machine Learning Engineer Intern

• Built a smart hiring solution using BERT natural language processing models to automate the hiring process and eliminate subconscious human biases. Designed the UI/UX for the application.

Tech Stack: Python, TensorFlow, Spacy, NLTK, Universal Sentence Encoder, StanfordNLP, ReactJS, NumPy and Pandas.

Isgood.ai, Melbourne, Australia

October 2019 - June 2020

Developer Volunteer

• As a frontend developer, I built a dashboard for client management and data visualisations. Handled API requests and data fetching using web-workers. Developed the backend using Python to manage database connections and integrate with the Machine Learning API.

Tech Stack: ReactJS, Pug, SCSS, ChartJS, Python and Flask.

Infosys, Hyderabad, India

October 2015 - February 2018

System Engineer

- As a full-stack developer, I built a project onboarding management portal. The application includes role-based access, document uploading, viewing, and approval forms. The application improved onboarding efficiency by 50%.
 Tech Stack: ReactJS, Redux, NodeJS, ExpressJS and MongoDB.
- Developed a web application for monitoring solar power plant data. Integrated a KNN machine learning model to predict health levels and possible errors. The final product eliminated the need for third-party data monitoring and reduced company costs by 80%.

Tech Stack: ReactJS, D3.js, Python, Scikit-Learn and Flask.

• As a front-end developer, I created a loan disbursement application. I developed dynamic forms with custom validations and populated forms based on different scenarios.

Tech Stack: AngularJS, Karma and JavaScript.

EDUCATION

Master of Data Analytics

Deakin University, Melbourne, Australia

Bachelor of Technology

Punjabi University, Punjab, India
